As an XM radio subscriber I appreciate the addition of traffic and weather information now available on this service. As a paying subscriber I am voting with my dollars to support the XM satellite service, which provides me with commercial free programming not available via the free airwaves. I resent the fact that any group, in this case the National Association of Broadcasters, is trying to influence the rules which govern what I permitted to receive for my subscription fees. Therefore, I request, in the strongest possible way, that the members of the committee reject petition 04-160 which would cause a reduction in the service provided to me by XM Satellite Radio. Since I pay for this service I resent any other group, other than subscribers, attempting to modify XM's programming.
